

Instructions should follow during Coding Interview:

- Don't act like a robot in during Interview
- Little bit informal connect is needed
- Start your interview by saying your name, college, etc....
- Then details of project, internships if did, and make sure that don't keep it robotic
- Maintain smile during interview, it is good impression on interviewer
- Never stress much, connect to interviewer as a human
- We can say that I need 2-3 minutes to process the question, then I will discuss my doubts with you.

Steps after coding interview started:

1. Don't be silent and start asking questions related to your problem, by this other person thinks that you are a good observer.
2. We need to talk about the solution, like I have two approaches to solve this question, and optimized approach for solving this question is xyz...
3. Coding part:
  - Variable naming should be perfect
  - Try to write everything in intended manner and use functions in proper manner, this makes our code good
  - While writing of each line of code, speak clearly and explain everything

- If there is a time then Dry run concept should be applied, by that is is considered as a actual testing of code by the interviewers.

#### 4. Final steps:

- After coding implementation is over, tell that ask me / any questions for me?
- Interviewer may ask the final question like what tech stack and domain, team you worked in at company xyz...?
- If you ask 10 to 15 minutes extra if you are not getting that problem, then it definitely sure that your losses your 50% marks or aggregate.

#### Noncoding session / non-technical things:

1. Number of LinkedIn connections- it should high, about 2000-3000 minimum
2. Showoff Profile visibility on LinkedIn not on other social media
3. LinkedIn applications- apply more and more, i.e. apply math's and probability principle
